

Clinic Ledger Issues

GAGAN INSERT THE IMAGE OF CHATGPT LANDING PAGE

Add drop-down to the relationship in the new patient column

The Mic button stopped working

All patients page sorting issue, the list doesn't update

Enable left right scroll for every element row bar so that the text doesn't wrap to next line

Going back once closes the app, no exit modal or the double tap protection

Edges of the search bar are rounded but border line is rectangle so it is cut off

Page flow is wrong as going back once in the backup and restore page does not go to settings page but home page

There are two back arrows on many pages. The navigation of the whole system seems off

When changing language in settings, the page changes to home, it does not remain in settings

Navigation is not uniform, the All Patients page is reachable through recent patients, remove that

Make navigation uniform

Adding a home button on top of each page is wrong

If doing AI in the app, which lives in the app like notion, the Mic button should be on each page to ask a question

The village icon an navigation to home icon are same

In Village and families page, you should be able to edit the whole family group, but you can only change the name here, and that function has issues to add it is here and there, you can edit it on card or something, link it or something, i mean it is a mess

There is no place in the whole app where i can know all the transactions that happening in chronological order, i mean logs or history that are in every payment app

The profile photo section is absent, but it can be useful, like using Mic my father is adding a new patient, then there should pop up a message to open a camera and take a photo for profile picture.

Then image based matching is also feasible

I can't edit Village of phone number of a patient anytime after once adding a new patient

Adjustment, Payment, Medicine, these three somehow doesn't represent their function by name only

And adding + for dues in red and - for payment in green is out of habit even if correct, the whole calculation system seems ill fitted

My father mostly used lower case for everything, so the card should automatically fix to Aa Bb type

Everything like analytics and other pages should be adjusted reaccordingly

Financial Stats on Analytics should extend to a new modal by tapping on each section

Make respective modals for all four sections and also for each village in dues breakdown per village and also in all three sections

of Overdue Dues Aging(Inactive Accounts) and the same in patient not visited more than 60+ days section

In family members in the grouping of clinic memory, for Hazari Lal Yadav, relationship is mentioned as Grandfather, but this is wrong point of view, a family tree would best represent it, make this the setting everywhere

Also the negative dues shown in many places, remove that setting, if a person paid for another family member, decrease that amount from the family member's account, but mention it on both their accounts, but don't count it on the payer's total calculation but only on the family member's calculation, but it should be mentioned in both places, paid for: in payer's account, and paid by: in family member's account

And in all patients mention total number of patients somewhere, and do it in analytics section too where it fits

Somewhere i tapped in two different places in quick succession and the whole page went black in dark mode, maybe would have gone white in white mode, must be some bug, it happens when you use the back button to go back, and click the same section of the screen once again in quick succession in villages and families and also in backup and restore, it means it happens with the white back arrow and the same happens with green back arrow

When you double click on the home button in add patient page, it just blinks and the screen remains the same, but screen should

return to home screen then come back to add patient page, which means the response is very slow

In clinic memory, beside family group, there are two +s on adding family option

Refine the headings or titles of each component according to its work properly

In clinic memory, for village networks, after tapping the village, there is family groups mentions and can be expanded but no individual/unlinked patients mentioned

In quick facts in institutional insight, no total no of patients are mentioned

In backup and restore page, there is a databases maintainance section which is totally unnecessary and the auto backup section is enabled automatically with no way to disable it, there should be a toggle switch , and no backup and restore logs are there, and automatic and manual should be mentioned in logsreplace the database maintainance section with backup and restore logs

I added a village named Choru in English mode, then changed to Hindi mode but it did not automatically change to चोरू

The sidebar consumes 80% of screen which is not needed, it should fit in according to word length + some padding

Shouldn't the opening page look like this: Chat chatgpt Android opening/landing page

as an overlay over the blurred background as home screen

English

Seperate the workload of Analytics, Settings and other things, don't mix up like Village and Families in Settings and other things, there are a few more mix ups in the app, properly do the seperation even if you have to make a few more pages in sidebar Also make a tutorial for the person opening the app for first time with instructions and info and make it interactive type not information type.

Change the icons, even app icon, update to new modern icons and make new app icon, take inspiration from the Hermes's staff which is used as a symbol of medicine and a ledger, maybe a book or something, but make the icon centered and keep the other spaces blank like all these icons like what's apps, docs, play store and we need to update the name to proper name to

Make the animations smooth for whole app

Make the proper going back setting for going back for gesture
sidescreen back method

The circle animation of dropdown of expanding the family group in
clinic memory page and the background

blurring/breaking/becoming wooden animation after tapping on a
page on sidebar and other places, and other animations, they are
all very very bad, upgrade animations across the page.

Settings and all the other pages should look like this similar to my
notes app, this send better isn't it:

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,

"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%)

Make the whole app uniform in everything.

Make every setting useful. Make every function work.
